Ask yourself, what kind of software do you use? What kind of a user are you? Most people will say they need MS Office, Photoshop, a calender and MSN (Or any other chat client). The truth is, unless your a professional user, Linux has all the same tools for free

Here is a short list of programs that do the same thing as propriety

MSN/Chat - Pidgin

MS Office - Open Office

Photoshop - Gimp

Outlook - Thunderbird

Calender - Usually built in with OS like Ubuntu. Lots of different calender software out there

The Eee PC runs on Xandros, an Open Source and Proprietary hybrid. Xandros is a Debian derivative that uses KDE. The Eee's Xandros runs a custom tabbed interface, but also has an "Advanced Mode", which switches it to KDE 3. The Eee PC is also able to run other Linux distributions such as Ubuntu and openSUSE.
