Summary: *Quick report about site traffic*

Tux Machines has been enjoying growth in recent weeks, though it's hard to attribute it to anything in particular. The following are the past 4 weeks' logs (we delete all logs after 4 weeks, for privacy reasons, assuring no long-term retention).

```
-rw-r--r--.  1 root root 389699117 Oct  9 04:40 access.log-20161009
-rw-r--r--.  1 root root 454715290 Oct 16 03:46 access.log-20161016
-rw-r--r--.  1 root root 478747167 Oct 23 03:12 access.log-20161023
-rw-r--r--.  1 root root 499911551 Oct 30 03:40 access.log-20161030
```

We recently quadrupled the servers' CPU capacity.

The above is not the complete picture. That's omitting all the Varnish activity, which handles the majority of the traffic but simply cannot cache all pages. We are still trying to reduce the frequency of spam incidents (some of the spammy submissions manage to inject JavaScript very briefly).

We'll soon reach the 100,000-node milestone of this Drupal site. [?](#)
